## Programming Languages and Translators

**COMS W4115** 

Pieter Bruegel, The Tower of Babel, 1563

Prof. Stephen A. Edwards
Fall 2004
Columbia University
Department of Computer Science

#### Instructor

Prof. Stephen A. Edwards sedwards@cs.columbia.edu
http://www1.cs.columbia.edu/~sedwards/
462 Computer Science Building
Office Hours: 2–3 PM Tuesday, Thursday

## **Schedule**

Tuesdays and Thursdays, 11:00 AM to 12:15 PM

Room 535, Seeley W. Mudd

Lectures: September 7 to December 9

Midterm: November 9

Final: December 9

Final project report: December 21

Holidays: November 2 (Election day), November 25 (Thanksgiving)

## **Objectives**

Theory of language design

- Finer points of languages
- Different languages and paradigms

Practice of Compiler Construction

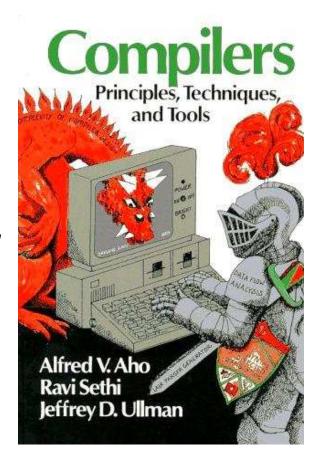

- Overall structure of a compiler
- Automated tools and their use
- Lexical analysis to assembly generation

## **Required Text**

Alfred V. Aho, Ravi Sethi, and Jeffrey D. Ullman.

Compilers: Principles, Techniques, and Tools.

Addison-Wesley, 1985.

## **Assignments and Grading**

40% Programming Project

20% Midterm (near middle of term)

30% Final (at end of term)

10% Individual homework

Project is most important, but most students do well on it. Grades for tests often vary more.

## **Prerequisite: Java Fluency**

You and your group will write perhaps 5000 lines of Java; you will not have time to learn it.

We will be using a tool that generates fairly complicated Java and it will be necessary to understand the output.

## Prerequisite: COMS W3157 Advanced Programming

Teams will build a large software system

Makefiles, version control, test suites

Testing will be as important as development

# Prerequisite: COMS W3261 Computability and Models of Computation

You need to understand grammars

We will be working with regular and context-free languages

### **Class Website**

Off my home page,

http://www1.cs.columbia.edu/~sedwards/

Contains syllabus, lecture notes, and assignments.

Schedule will be continually updated during the semester.

### Collaboration

Collaborate with your team on the project.

Exception: CVN students do the project by themselves.

Homework is to be done by yourself.

Tests: Will be closed book with a one-page "cheat sheet" of your own devising.

## The Project

## The Project

Design and implement your own little language.

#### Five deliverables:

- A white paper describing and motivating your language
- 2. A language reference manual defining it formally
- 3. A compiler or interpreter for your language running on some sample programs
- 4. A final project report
- 5. A final project presentation

#### **Teams**

Immediately start forming four-person teams to work on this project.

Each team will develop its own langauge.

Suggested division of labor: Front-end, back-end, testing, documentation.

All members of the team should be familiar with the whole project.

Exception: CVN students do the project by themselves.

### **First Three Tasks**

- 1. Decide who you will work with You'll be stuck with them for the term; choose wisely.
- Elect a team leader
   Languages come out better from dictatorships, not democracies. Besides, you'll have someone to blame.
- 3. Select a weekly meeting time

  Harder than you might think. Might want to discuss
  with a TA you'd like to have so it is convenient for
  him/her as well.

## White Paper

Follow the style of the Java white paper (see the class website for a link), but tone down the marketing hype.

4–8 pages.

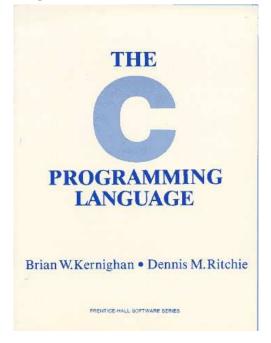

Answer the question, "why another language?" with a description of what problem your language solves and how it should be used.

Small snippets of code to show syntax is enough.

## Language Reference Manual

A careful definition of the syntax and semantics of your language.

Follow the style of the C language reference manual (Appendix A of Kernighan and Ritchie, *The C Programming Language*; see the class website).

## **Final Report Sections**

- 1. Introduction: the white paper
- 2. Language Tutorial
- 3. Language Reference Manual
- 4. Project Plan
- 5. Architectural Design
- 6. Test Plan
- 7. Lessons Learned
- 8. Complete listing

## **Due Dates**

White Paper September 28 soon

Reference Manual October 21

Final Report December 21

## Design a language?

A small, domain-specific language.

Think of awk or php, not Java or C++.

#### Examples from earlier terms:

Quantum computing language

Geometric figure drawing language

Projectile motion simulation langauge

Matlab-like array manipulation language

Screenplay animation language

## Other language ideas

Simple animation language

Model train simulation language

Escher-like pattern generator

Music manipulation language (harmony)

Web surfing language

Mathematical function manipulator

Simple scripting language (à lá Tcl)

Petri net simulation language

# What's in a Language?

## Components of a language: Syntax

How characters combine to form words, sentences, paragraphs.

```
The quick brown fox jumps over the lazy dog.
is syntactically correct English, but isn't a Java program.
class Foo {
  public int j;
  public int foo(int k) { return j + k; }
}
Is syntactically correct Java, but isn't C.
```

## **Specifying Syntax**

Usually done with a context-free grammar.

Typical syntax for algebraic expressions:

```
expr 
ightharpoonup expr + expr
| expr - expr
| expr * expr
| expr/expr
| digit
| (expr)
```

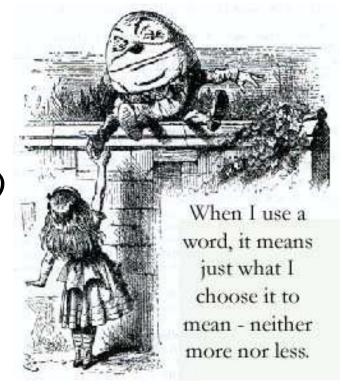

# Components of a language: Semantics

What a well-formed program "means."

The semantics of C says this computes the nth Fibonacci

number.

```
int fib(int n)
{
  int a = 0, b = 1;
  int i;
  for (i = 1; i < n; i++)
    int c = a + b;
    a = b;
    b = c;
  }
  return b;
}</pre>
```

## **Semantics**

Something may be syntactically correct but semantically nonsensical.

The rock jumped through the hairy planet.

Or ambiguous

The chickens are ready for eating.

## **Semantics**

```
Nonsensical in Java:
class Foo {
  int bar(int x) { return Foo; }
Ambiguous in Java:
class Bar {
  public float foo() { return 0; }
  public int foo() { return 0; }
```

## **Specifying Semantics**

Doing it formally beyond the scope of this class, but basically two ways:

#### Operational semantics

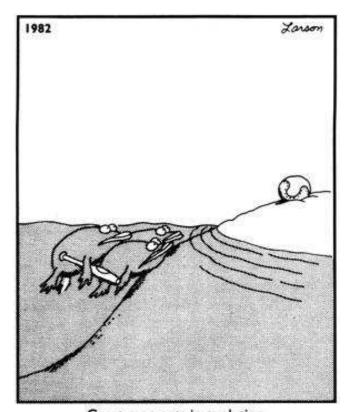

Define a virtual machine and how executing the program evolves the state of the virtual machine

#### Denotational semantics

Shows how to build the function representing the behavior of the program (i.e., a transformation of inputs to outputs) from statements in the language.

Most language definitions use an informal operational semantics written in English.

## Great Moments in Programming Language Evolution

Great moments in evolution

## **Assembly**

```
Before: numbers
                   After: Symbols
                   gcd: pushl %ebp
55
89E5
                        movl %esp, %ebp
                        movl 8(%ebp), %eax
8B4508
                        movl 12(%ebp), %edx
8B550C
39D0
                        cmpl %edx, %eax
740D
                         je .L9
                    .L7: cmpl %edx, %eax
39D0
7E08
                         jle .L5
29D0
                         subl %edx, %eax
                    .L2: cmpl %edx, %eax
39D0
75F6
                         jne .L7
                    .L9: leave
C9
C3
                        ret
29C2
                    .L5: subl %eax, %edx
                         jmp .L2
EBF6
```

### **FORTRAN**

#### Before

#### gcd: pushl %ebp movl %esp, %ebp movl 8(%ebp), %eax movl 12(%ebp), %edx cmpl %edx, %eax ie .L9 .L7: cmpl %edx, %eax jle .L5 subl %edx, %eax .L2: cmpl %edx, %eax jne .L7 .L9: leave ret .L5: subl %eax, %edx jmp .L2

#### After: Expressions, control-flow

```
10    if (a .EQ. b) goto 20
    if (a .LT. b) then
        a = a - b
    else
        b = b - a
    endif
    goto 10
20    end
```

#### COBOL

Added type declarations, record types, file manipulation

```
data division.
file section.
   describe the input file
fd employee-file-in
           label records standard
           block contains 5 records
           record contains 31 characters
           data record is employee-record-in.
01 employee-record-in.
    02 employee-name-in pic x(20).
    02 employee-rate-in pic 9(3)v99.
    02 employee-hours-in pic 9(3)v99.
    02 line-feed-in
                          pic x(1).
```

## LISP, Scheme, Common LISP

#### Functional, high-level languages

```
(defun gnome-doc-insert ()
  "Add a documentation header to the current function.
Only C/C++ function types are properly supported currently."
  (interactive)
  (let (c-insert-here (point))
    (save-excursion
      (beginning-of-defun)
      (let (c-arglist
            c-functione
            (c-point (point))
            c-comment-point
            c-isvoid
            c-doinsert)
        (search-backward "(")
        (forward-line -2)
        (while (or (looking-at "^$")
                    (looking-at "^ *}")
                    (looking-at "^ \\*")
                    (looking-at "^#"))
          (forward-line 1))
```

#### **APL**

#### Powerful operators, interactive language

```

#### **BASIC**

#### Programming for the masses

```
10 PRINT "GUESS A NUMBER BETWEEN ONE AND TEN"
20 INPUT A$
30 IF A$ = "5" THEN PRINT "GOOD JOB, YOU GUESSED IT"
40 IF A$ = "5" GOTO 100
50 PRINT "YOU ARE WRONG. TRY AGAIN"
60 GOTO 10
100 END
```

## Simula, Smalltalk, C++, Java, C#

#### The object-oriented philosophy

```
class Shape(x, y); integer x; integer y;
virtual: procedure draw;
begin
   comment -- get the x & y components for the object
   integer procedure getX;
      qetX := x;
   integer procedure getY;
      getY := y;
   comment -- set the x & y coordinates for the object
   integer procedure setX(newx); integer newx;
      x := newx;
   integer procedure setY(newy); integer newy;
      y := newy;
end Shape;
```

## C

#### Efficiency for systems programming

```
int gcd(int a, int b)
{
   while (a != b) {
    if (a > b) a -= b;
    else b -= a;
   }
   return a;
}
```

## ML, Miranda, Haskell

#### Purer functional language

```
structure RevStack = struct
  type 'a stack = 'a list
 exception Empty
  val empty = []
  fun isEmpty (s:'a stack):bool =
    (case s
       of [] => true
        | _ => false)
  fun top (s:'a stack): =
    (case s
       of [] => raise Empty
       x::xs => x
  fun pop (s:'a stack):'a stack =
    (case s
        of [] => raise Empty
         x::xs => xs
  fun push (s:'a stack,x: 'a):'a stack = x::s
  fun rev (s:'a stack):'a stack = rev (s)
end
```

## sh, awk, perl, tcl, python

Scripting languages: glue for binding the universe together

```
class() {
  classname='echo "$1" | sed -n '1 s/ *:.*$//p''
  parent='echo "$1" | sed -n '1 s/^.*: *//p''
  hppbody='echo "$1" | sed -n '2,$p''

  forwarddefs="$forwarddefs
  class $classname;"

  if (echo $hppbody | grep -q "$classname()"); then
    defaultconstructor=
  else
    defaultconstructor="$classname() {}"
  fi
}
```

## VisiCalc, Lotus 1-2-3, Excel

#### The spreadsheet style of programming

	А	В
1	Hours	23
2	Wage per hour	\$ 5.36
3		
4	Total Pay	= B1 * B2

## SQL

#### Database queries

```
CREATE TABLE shirt (
    id SMALLINT UNSIGNED NOT NULL AUTO_INCREMENT,
    style ENUM('t-shirt', 'polo', 'dress') NOT NULL,
    color ENUM('red', 'blue', 'white', 'black') NOT NOT NOT NOT SMALLINT UNSIGNED NOT NULL
        REFERENCES person(id),
    PRIMARY KEY (id)
);

INSERT INTO shirt VALUES
(NULL, 'polo', 'blue', LAST_INSERT_ID()),
(NULL, 'dress', 'white', LAST_INSERT_ID()),
(NULL, 't-shirt', 'blue', LAST_INSERT_ID());
```

## **Prolog**

#### Logic Language

```
edge(a, b). edge(b, c).
edge(c, d). edge(d, e).
edge(b, e). edge(d, f).
path(X, X).
path(X, Y) :-
edge(X, Z), path(Z, Y).
```
